Create A Webpage Assignment

You should use...

Notepad++

Adobe Photoshop

Adobe Illustrator

To create...

1 (one) Complete Website

- Links
- Images
- Content
- Navigation
- CSS

Instructions: Using what you know about HTML and CSS, you will create a website using Notepad++, Adobe Photoshop, and Adobe Illustrator.

Remember, you should use your webpage template file to draft a mock-up of what you want your final site to look like.

Part 1 -Plan out your Website Layout & Theme

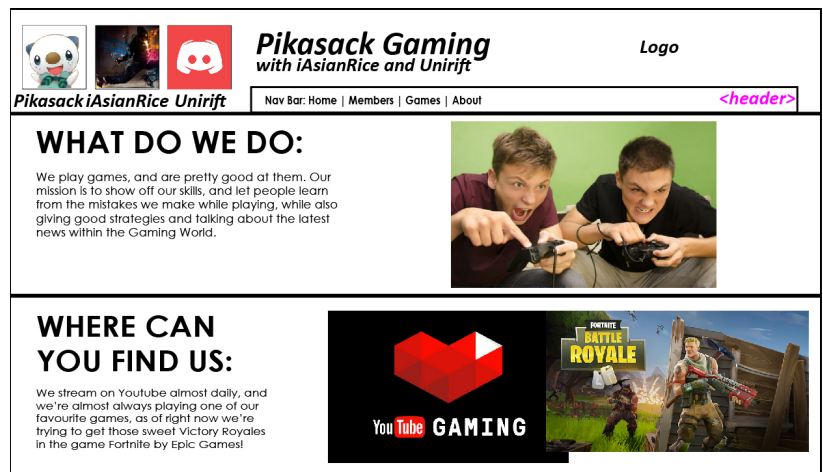

Step 1 – Think of a Theme

- What is your website going to be about? (hobby, diary, interest, fan-site, portfolio, etc.)

My theme is: Pikasack Fan-site

Step 2 – Decide on a Layout

- What is my site going to **look like**?
- Where am I placing:
 - Header
 - Navigation
 - Body/Content
 - Article or Aside
 - Footer
- Have I used the **Illustrator** file to help me place elements?
- Have I created the images/content using **Illustrator & Photoshop**?

Step 3 – Decide on Content

- Where am I going to get this content? Will I have to create most of it? Some of it?
- What images am I going to include? How many? Will I need to create them?
- What kind of text will I have on my website? Will it be written by me?
- How am I going to present this content?
- What do I want my viewers to do with this content? How will they interact with it?
